One-step Fourier wire, resource squeezing r=1.0, 4000 shots per backend
(ensemble - analytic) / SE, mean
gaussian
native-gaussian
piquasso
acceptance ±5 SE
0.0+0.0i
0.3+0.2i
-0.5+0.1i
1.0+0.0i
0.2-0.4i
-0.8-0.6i
Coherent input α (left marker q, right marker p)
(ensemble - analytic) / SE, variance
Coherent input α (left marker q, right marker p)
Finite-squeezing noise (N_qq = 0)
Added output variance
gaussian_channel N_pp
e^{-2r} (closed form)
Resource squeezing r
