Fock cutoff convergence: first four panels use the highest cutoff as reference, last two the exact Gaussian moments (values below 1e-16 are exact zeros drawn at the floor)
cat_state (ref. c=64)
photon_subtraction (ref. c=32)
cubic_phase (ref. c=64)
gkp_resource (ref. c=96)
displaced_squeezed_gates (exact Gaussian reference)
thermal_displaced_squeezed (exact Gaussian reference)
