(a) covariance error, gates + loss
$\max|V_{native} - V_{ref}|/\max|V_{ref}|$
Circuit depth D (gates)
n=1
n=2
n=4
n=8
n=16
n=32
n=64
n=128
bound $64\,D\,\varepsilon$
(b) symplectic residual, native S
$\|S\Omega S^T - \Omega\|_{max}/\|S\|_2^2$
Circuit depth D (gates)
(c) conditioning vs dilation reference
native: conditional moments
native: outcome density (rel.)
native vs NumPy (same outcome)
acceptance 1e-10
